CORE COMPETENCIES

Full-Stack Development	Agile & Scrum Methodologies	UI/UX Design & Rapid Prototyping
System Design & Architecture	Technical Problem-Solving & Initiative	Data-Driven Product Development

EXPERIENCE

Software Engineer <i>Clubspot</i>	<i>Jan 2025 - Present</i> San Francisco, CA
➔ Own full-cycle feature development across the product, from client requirements gathering and feature demos to end-user UI and internal admin tooling; operating with high autonomy on a small engineering team. ➔ Engineered a deterministic data abstraction layer that deconstructs complex document schemas into functional data definitions, enabling autonomous LLM agents to safely execute precise tool calls and platform-wide workflows. ➔ Improved production observability by introducing error tracking and hardening the deploy process, filling a gap with no formal DevOps function on the team. ➔ Optimized a resource-intensive computation pipeline, reducing peak query latency by up to 80% (from 25s to under 5s). ➔ Build and ship member-facing white-label React Native apps, giving each club a branded mobile experience, and handling high-volume mobile transactions and real-time bookings. ➔ Maintain socket-based network printing integrations for kitchen ticket hardware (ESC/POS protocol), troubleshooting client local network configurations to resolve live production failures.	
Freelance Software Engineer <i>5280 Auto Hail Repair and Collision Center</i>	<i>Jun 2025 - Oct 2025</i> Denver, CO
➔ Improved shop efficiency and customer satisfaction by architecting and developing a full-stack dual-portal system that consolidates critical operations into one unified platform. ➔ Enabled streamlined repair workflows and better cross-department visibility by designing and implementing a task dependency system with blocking dependencies, departmental organization, and multiple visualization views (timeline and heatmap). ➔ Simplified customer onboarding and account continuity by building a guest-to-user migration flow allowing customers to claim accounts via email verification and automatically link prior quotes, appointments, and repairs. ➔ Enhanced customer engagement and transparency by developing threaded messaging, image sharing, and live repair status updates synced with the internal task management system. ➔ Accelerated deployment and team productivity by establishing DevOps infrastructure with Docker containerization, CI/CD pipeline configuration, and cloud deployment architecture as the technical lead in a two-developer team.	
Software Development Intern <i>InvoiceCloud, Inc.</i>	<i>Jun 2024 - Aug 2024</i> Remote - Boston, MA
➔ Improved test suite execution time by 5x and improved scalability by enhancing an Azure pipeline using Kubernetes clusters to increase testing parallelism, added integration with Sauce Labs, and improved usability by adding support for filtering using Python and Bash scripting. ➔ Wrote 25 automated BDD test cases for UI and REST API features in Gherkin using SpecFlow in a C# and .NET environment. ➔ Used Selenium to map and interact with UI elements, integrating them into step definitions for BDD test cases.	
Web Application with Brigham & Women's Hospital	<i>Mar 2024 - May 2024</i>
➔ Delivered a feature-dense, functional prototype hospital kiosk web application as the lead developer in a front-end team. ➔ Led a front-end development engineering team, utilizing Typescript, React, and Material UI to develop the prototype. ➔ Deployed on the cloud using AWS EC, a Docker container, and AWS RDS to run the PostgreSQL server. ➔ The final software application prototype included hospital pathfinding, a map editor, and integrated service request modules. ➔ The prototype informed the hospital representatives about potential features, user interfaces, and design approaches for the application being developed by the hospital software development team.	
Data Collection App for WPI Global Projects Center <i>TypeScript, React, Node.js, Express, PostgreSQL</i>	<i>May 2024 - Oct 2024</i>
Market Research for a Car Sharing Start-up (Monteverde, Costa Rica) <i>WPI Global Project</i>	<i>Oct 2023 - Mar 2024</i>

EDUCATION

Worcester Polytechnic Institute (WPI) <i>GPA: 3.6</i> Graduated with Distinction Computer Science – Bachelor's of Science, Data Science – Minor	<i>Aug 2021 - May 2025</i>
--	----------------------------

TECHNICAL SKILLS

Languages & DB:	JavaScript, Typescript, Python, Go, C#, Java, SQL (PostgreSQL), NoSQL (MongoDB)
Web Development:	React, React Native, Vue, SvelteKit, Node.js, Express, .NET, Tailwind CSS, EJS, PrismaORM
Cloud & DevOps:	AWS, GCP, Azure DevOps, Docker, Kubernetes, Linux/Unix, Git (GitHub), Supabase
Tools & Collaboration:	Agile/Scrum, Slack, Jira, Microsoft Office Suite, AI Tools (Cursor, Claude Code, etc.)
